PERSONAL PROFILE

A Visual Basic Application Developer, I started back in 1998 on Power Plant in Russia with a recent contract job in Ireland ESB where I developed Excel based VBA scripts for new "Smart Metering" project. I am a sharp and logically thinking individual and always learning new things. Recently studying Java and Python languages and in the past Android, Windows Mobile, Basic, web development (appr.s.weebly.com). I am seeking opportunities within the IT sector specifically in Software Development that would give me the opportunity to learn new skills and put them into practice while working in a company. I feel an apprenticeship in the area would be an excellent opportunity and open the door to a progressive career in the area.
